

Helping captives flourish

Award-winning underwriting and data management platform for captives

Flexible technology from Websure enables smoother workflow, delivers substantial processing efficiencies and can reduce the overhead costs of administering captive business.

Producing clear, accurate management information can be labor intensive, involve complex processes, utilize multiple spreadsheets, and is open to human errors and inaccuracies.

Captives in any domicile can now manage the administration of their entire portfolio from one single secure database.

Websure helps captive organizations capture, manage and analyse all risk and insurance data, across all classes of business, within a single, online platform. Data is unified, standardized, validated, securely stored and accessed. Easy dashboard access allows effortless data interrogation, in turn enabling more effective risk assessment decisions, better solvency modeling and more timely reporting - ideal for firms running multiple or single entity models in a risk management, captive or a captive management capacity.
